## EXAMINER'S RESPONSE

### Status of Application

In response to the applicant's amendment received on 4/11/02. The examiner has considered the new presentation of claims and applicant arguments in view of the disclosure and the present state of the prior art. And it is the examiner's position that claims 1-18 remain unpatentable for the reasons set forth in this office action:

### ***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

1. Claims 1,2,10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bennett (4965569) and either Sone (5793304), Burgan (6166621) or McLaughlin (4975694).

Bennett shows a pager that present previously received messages. If a new message is received during the presenting of previously received messages the presenting is temporarily stopped and a new message is then presented. See figures 9A, 9B, 10A, 10B and their descriptions especially, col. 17 lines 29-36, lines 60-63 and elements 356 and 364 of figure 12A. Bennett differs from the claimed invention in that the presentation of the messages in Bennett is audible, while the presentation of the messages in the claimed invention is by display. One of ordinary skill in the art of

paggers is well aware that paggers can use displays to display the stored page information equally as well as the audible storage and playback of Bennett.

In an analogous art Sone, Burgan and McLaughlin each teach a pager that is used display messages. Sone, Burgan and McLaughlin show displaying messages in one of a plurality of formats and displaying other (or additional) messages in a different format. The difference in the display formats is used to convey that the messages have different characteristics. See Sone col. 1 lines 33-36, Burgan Figure 6 and McLaughlin figure 7. This aids the user in knowing the type of message being presented.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have displayed different types of messages in different fashions for displaying the messages being presented in the Bennett system in order to aid the user in knowing the type of message being presented.

2. Claims 3 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bennett and Sone, Burgan and McLaughlin as applied to claims 1 and 10 above, and further in view of Fennell (5430436).

In an analogous art, Fennell shows displaying common messages (equivalent to the already received messages of Bennett) in one format while displaying special messages (equivalent to new messages) in a different format. The difference in the formats is that one includes highlighting. See col. 3 lines 34+. This aids the user in knowing the type of message being presented.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have used displayed different types of messages in different fashions for displaying the messages being presented in the above modified system in order to aid the user in knowing the type of message being presented.

3. Claims 4-9 and 13-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bennett and Sone, Burgan and McLaughlin as applied to claims 1 and 10 above, and further in view of Nakajima (4477807).

In an analogous art, Nakajima shows a paging system where the messages are displayed in a sequential order based upon their arrival. See abstract. This allows the use to be aware of the importance of the received messages. The examiner takes official notice that tracking the arrival by time stamps of FIFO memory are both very common manners in the art to track the arrival sequence of messages.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have displayed received messages sequentially in the above-modified system in order to aid the user in determining the importance of the messages.

#### ***Response to Arguments***

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian A Zimmerman whose telephone number is 703-305-4796. The examiner can normally be reached on Off every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Horabik can be reached on 703-305-4704. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-872-9314 for After Final communications.
